

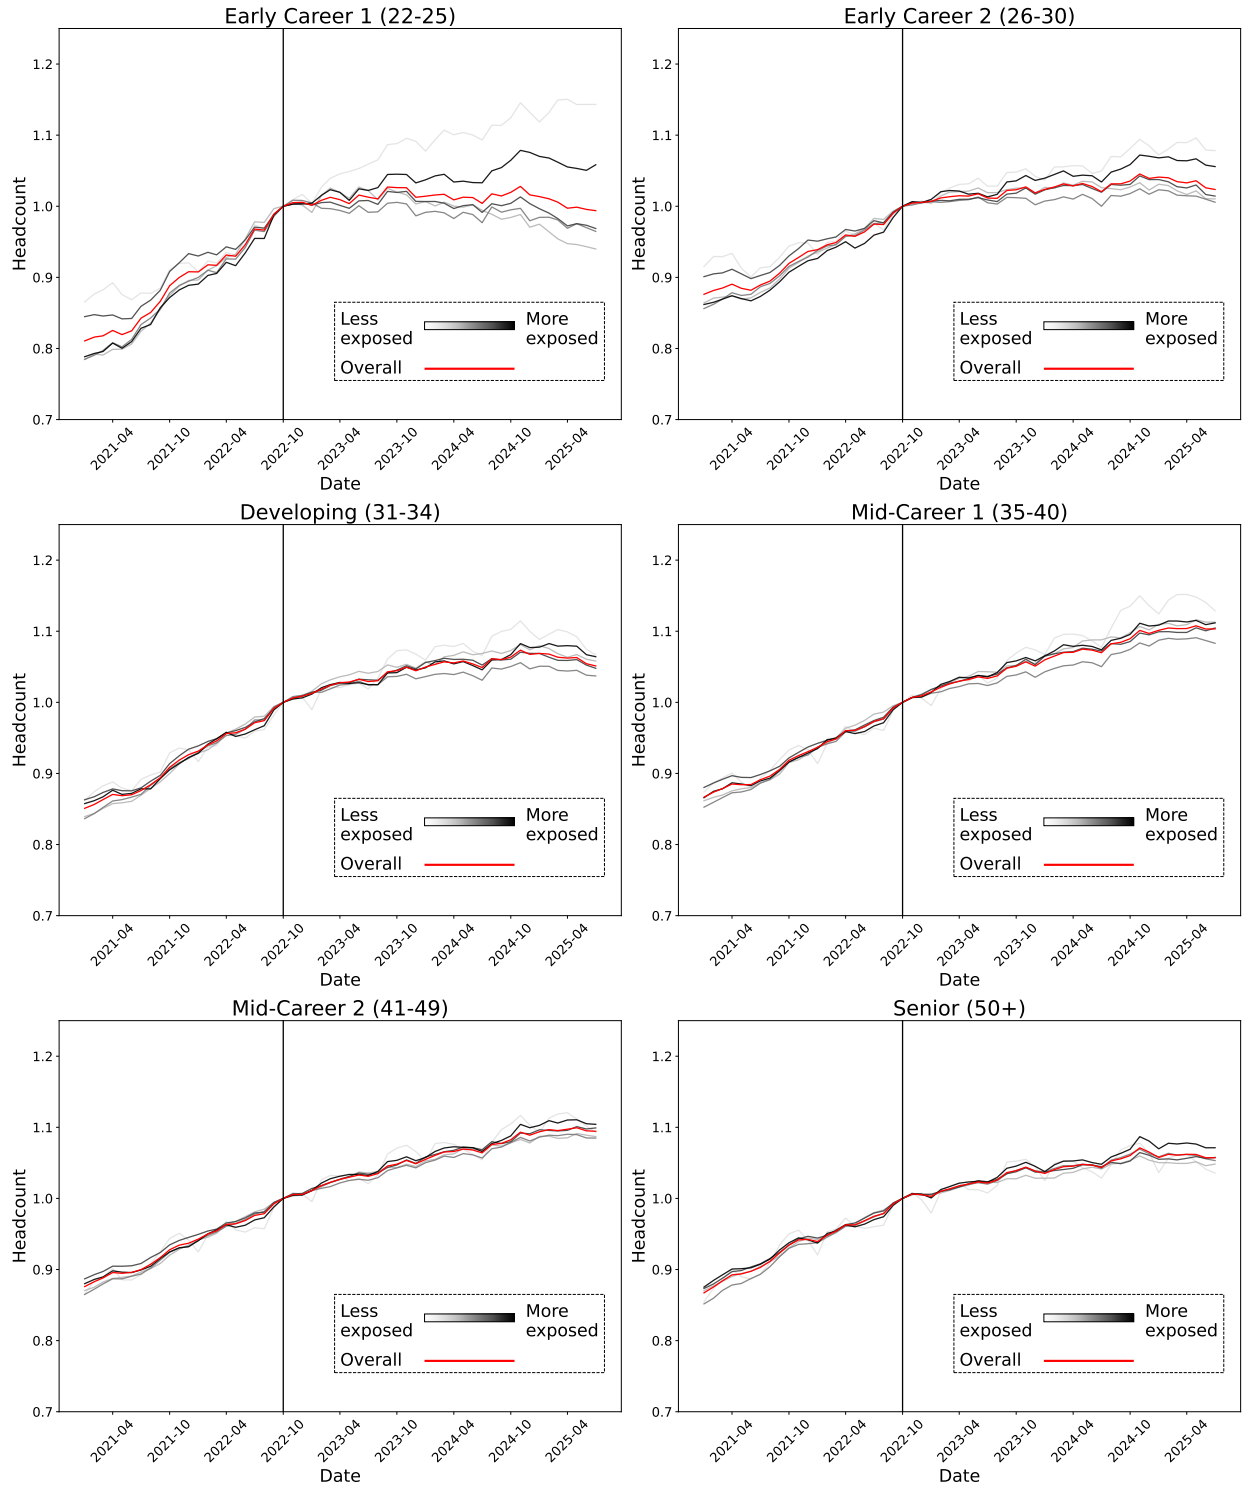

Figure A3: Employment changes by age and augmentation quintile using Claude usage data from [Handa et al. \(2025\)](#). Excluding occupations that have no Claude usage or are in the lowest quintile of overall Claude usage conditional on some usage.

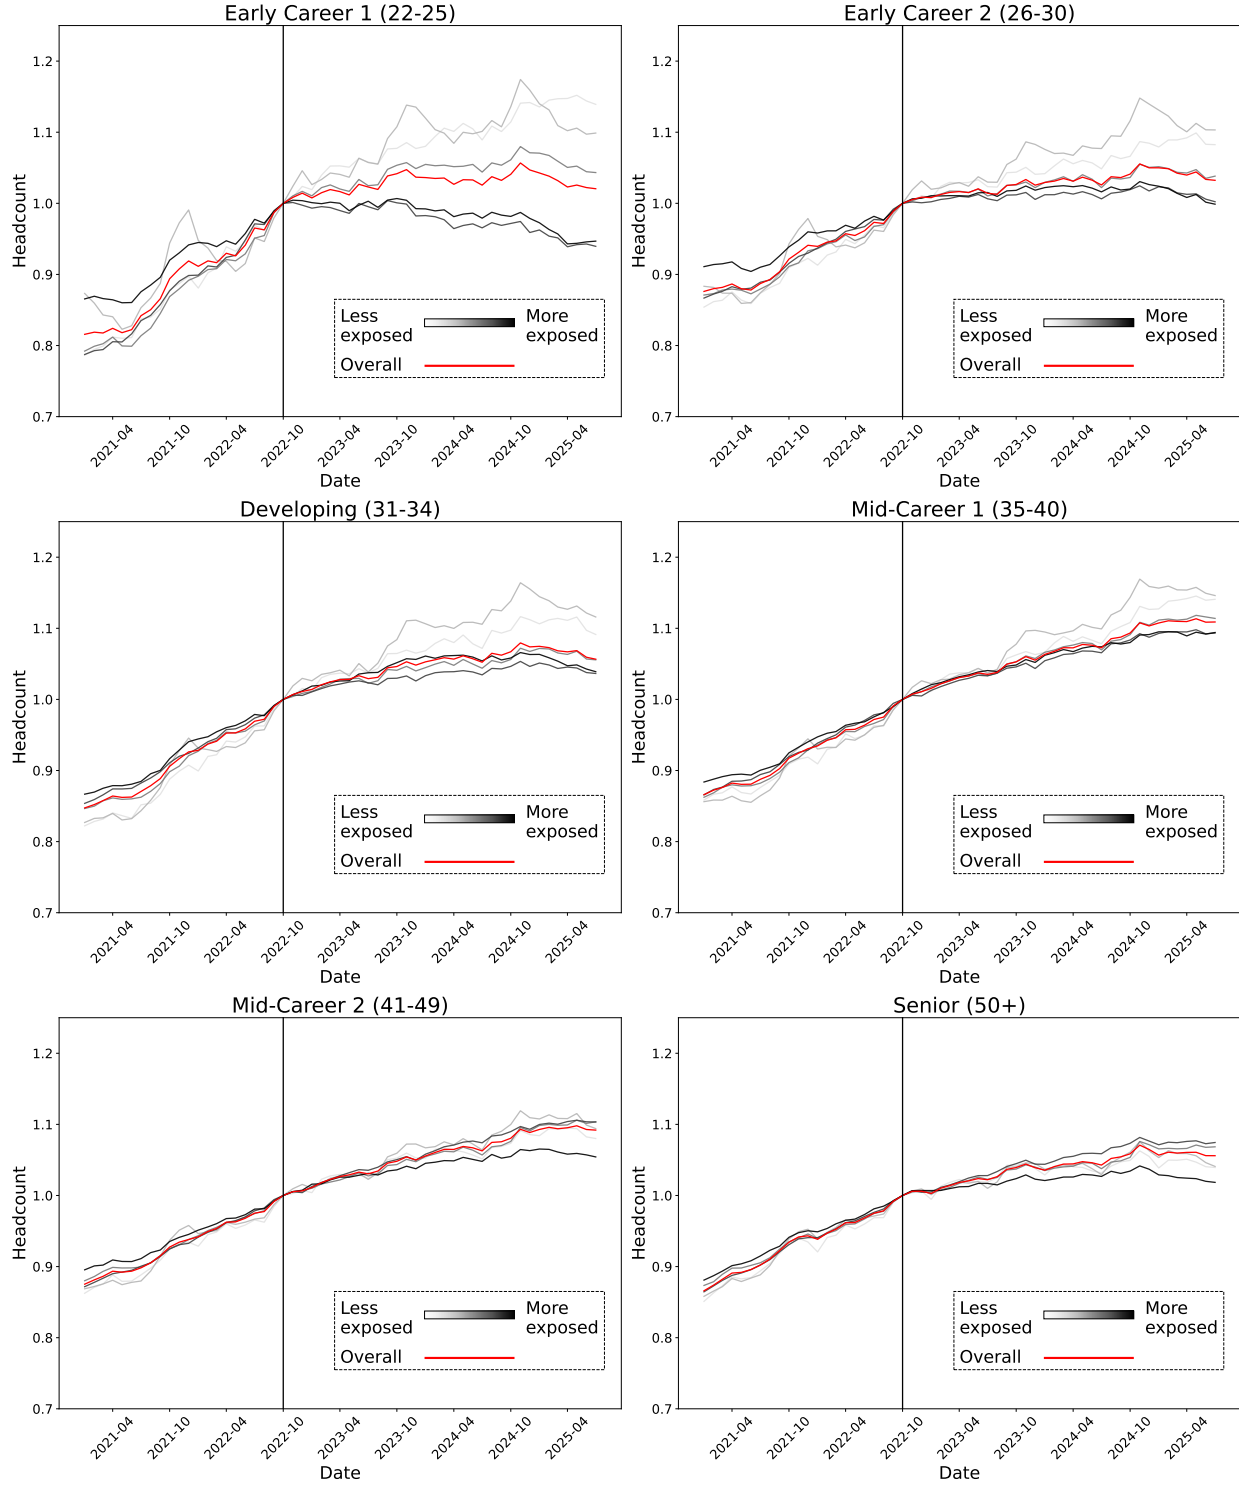

Figure A4: Employment changes by age and exposure quintile using measures from [Eloundou et al. \(2024\)](#). Excluding computer occupations (2010 SOC codes starting with 15-1).

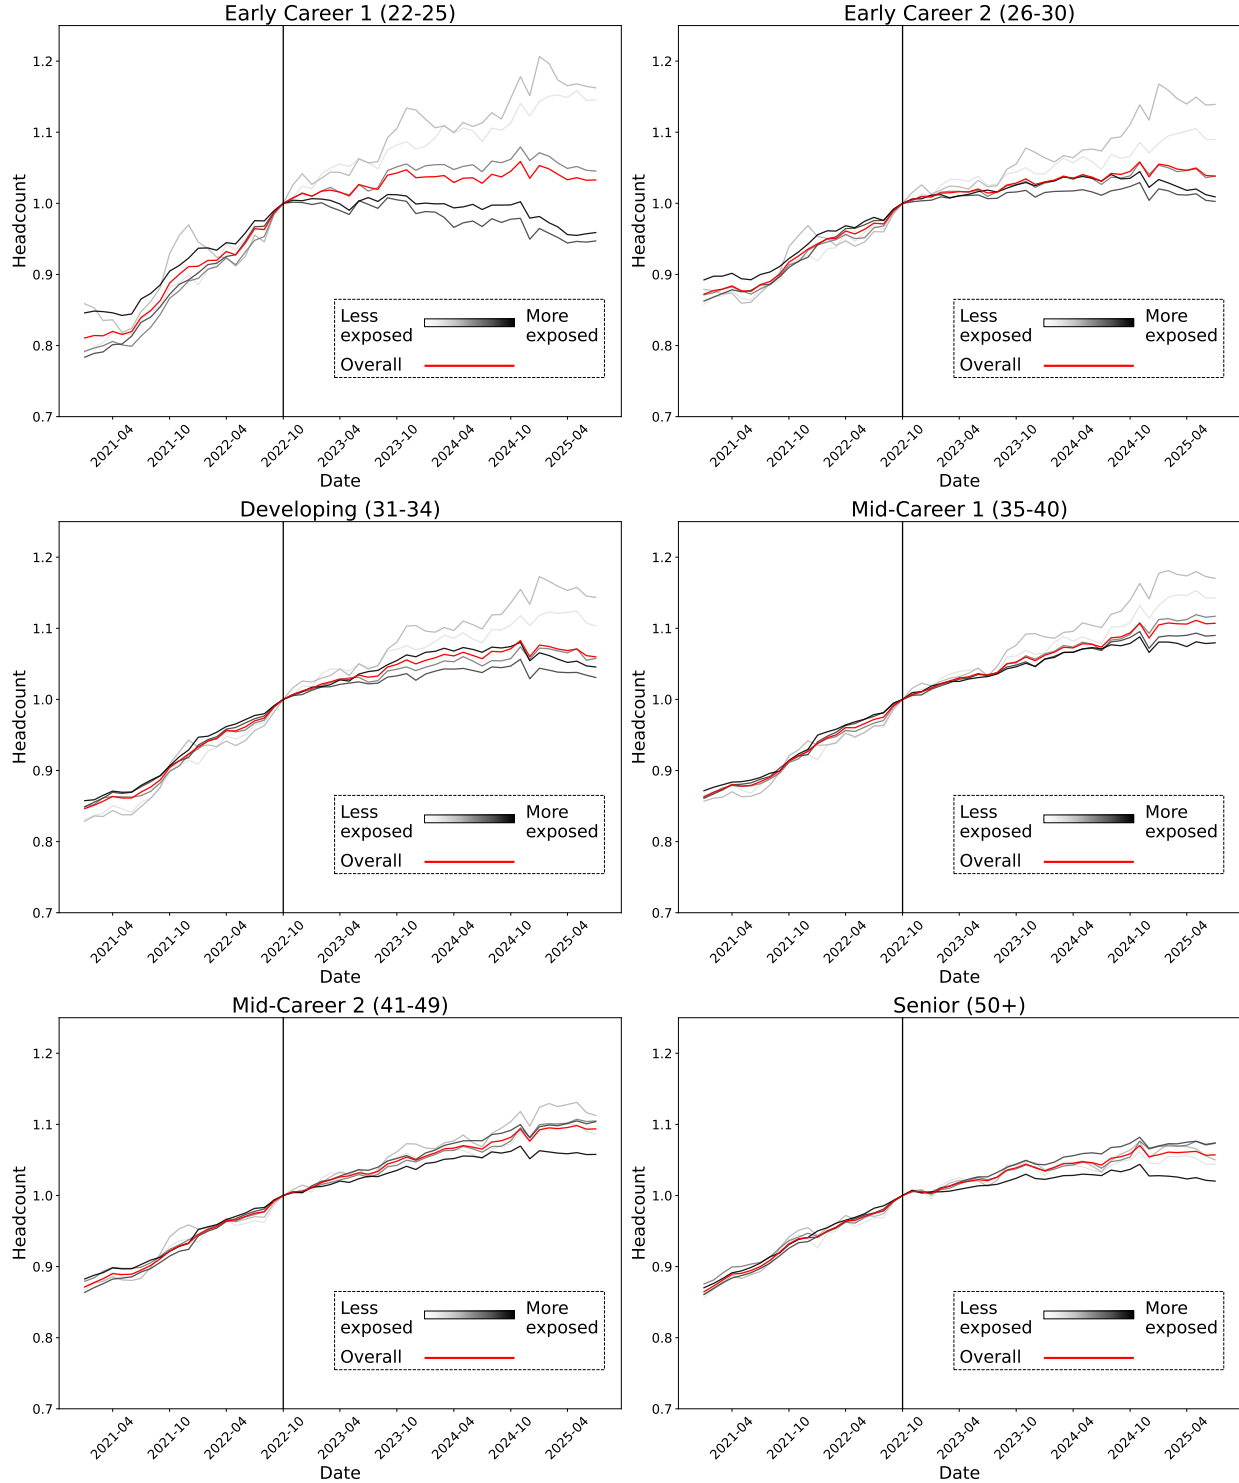

Figure A5: Employment changes by age and exposure quintile using measures from [Eloundou et al. \(2024\)](#). Excluding firms in the information sector (NAICS code 51).

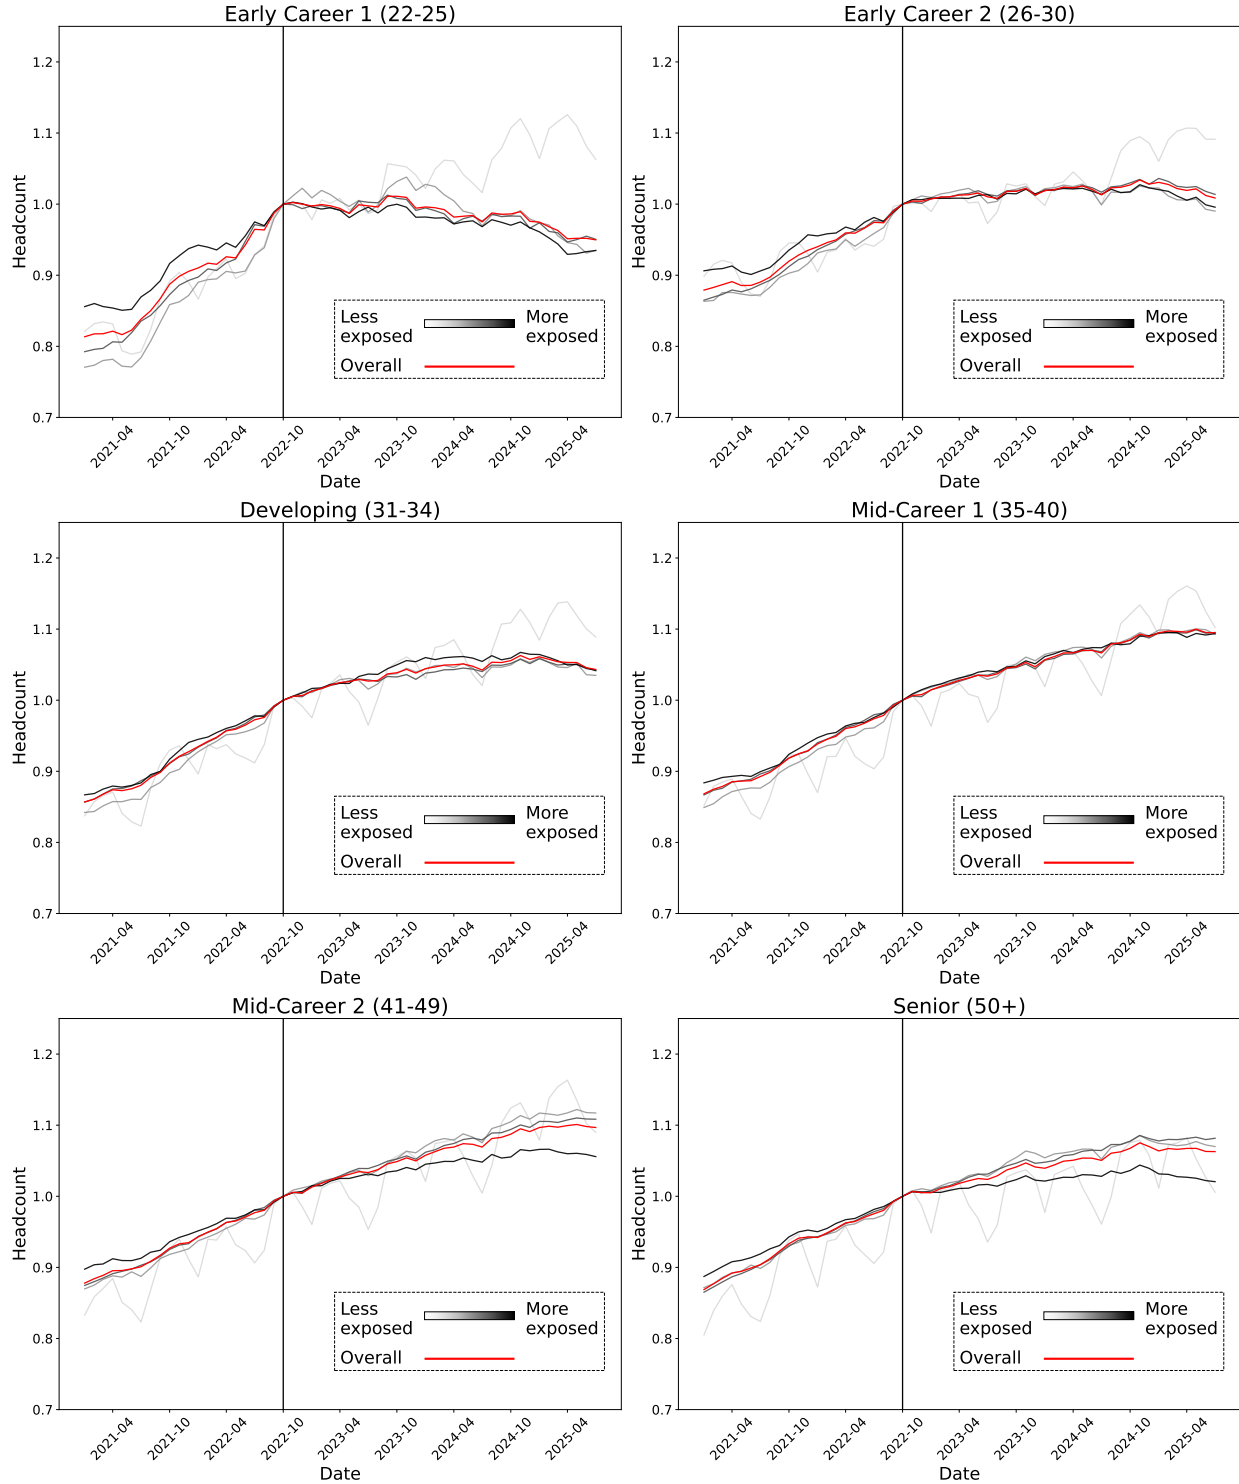

Figure A6: Employment changes by age and exposure group using measures from [Eloundou et al. \(2024\)](#). Including only teleworkable occupations according to [Dingel and Neiman \(2020\)](#). Note that very few teleworkable occupations fall in the lowest exposure quintile. All occupations in the first and second quintile are consequently grouped together in level 1. The remaining quintiles are coded as 2, 3, and 4.
