

B.3 Classification of New Job Tasks

Our survey includes free-text responses about the new tasks workers have received due to AI chatbots. We categorize these responses into six broad AI-related categories, listed in Table B.6, as well as into more granular, occupation-specific subtasks.

Table B.6: Categories of New Tasks from AI Chatbots

Task	Description
AI Ideation	Leveraging AI to spark or expand creative ideas—such as concepts, strategies, or solutions. The human selects and builds on the most promising suggestions.
AI Content Drafting	Using AI tools to generate initial drafts of text or media (e.g., documents, emails, code). The human professional prompts the AI, then edits and refines the output for accuracy and tone.
AI Quality Review	Reviewing AI-generated content for accuracy, clarity, and relevance. The human fact-checks, corrects errors, and ensures the output meets required standards.
AI Data Insights	Using AI to analyze data or documents and surface patterns, summaries, or key insights. The human then interprets and applies these findings to decisions.
AI Integration	Embedding AI into workflows to automate or enhance tasks. Professionals design prompts, refine workflows, correct outputs, and fine-tune systems based on feedback.
AI Ethics & Compliance	Ensuring AI use follows ethical, legal, and institutional standards. This includes setting guidelines, monitoring for bias or misuse, and reviewing outputs for compliance.

For all broad categories, we include an “Other” subtask for each occupation (e.g., *AI Integration, Other*) to ensure that every broad category is represented across all occupations. In addition, we include a “non-AI” task category, which typically captures new assignments for the worker that are not novel within the broader workplace or profession. Examples include “meeting with customers,” “taking over tasks due to freed-up time,” or the more ambiguous “handling more complex tasks GenAI cannot solve.”

To categorize the free-text responses, we divided them between two independent coders. Each coder then cross-checked a random sample of the other’s work, with near-complete agreement.

Figures B.1 illustrate that AI chatbots have led to the creation of new tasks across all 11 occupations in our study. Figure B.2 shows that 50% to 95% of these tasks are directly linked to AI use. Figure B.3 breaks down the composition of AI-related job tasks by occupation and task category.
