

Figure E.2: Employer Initiatives and Worker Gaps in Adoption

Notes: This figure illustrates the impact of employer usage policies on worker disparities in AI chatbot adoption. The estimates are obtained from a multivariate regression of AI chatbot adoption on worker characteristics X , controlling for occupation fixed effects, and are estimated separately based on employers' AI chatbot initiatives (Encouraged = 1 vs. Encouraged = 0). Whiskers represent 95% confidence intervals. The reported p-values test whether the coefficients differ between the two groups. *Sample:* All completed responses from the 2024 survey linked to registry data.

Notes: This table estimates how demographics gaps in AI chatbot adoption varies with employer initiatives. The estimates are obtained from a multivariate regression of AI chatbot adoption on worker characteristics X , controlling for occupation fixed effects, and are estimated separately based on employers' AI chatbot initiatives. All other characteristics are based on register variables from 2022. *Experience* is the years of employment in the relevant occupation. *Earnings* are total labor income. *Net Wealth* is the sum of real assets, financial assets, and pension savings minus the sum of priority debt, other private debt, and public debt, winsorized at the 5th and 95th percentiles. Standard errors in parentheses. *Sample:* The table is based on all complete responses from the 2024 survey that can be linked to the registry data.

Figure E.3: Importance of Employer Policies in AI Chatbot Adoption

(i) Usage Policy: Encouraged

(ii) Usage Policy: Not Allowed

(iii) Firm-Arranged Training

Notes: This figure illustrates the impact of employer policies on workers' use of AI chatbots. The estimates are based on predicted values from Equation (69), varying employer initiatives ($\text{EmployerInitiative} = 1$ vs. $\text{EmployerInitiative} = 0$) while holding workers' characteristics X at their mean values. Panel (i) splits workers based on whether their employer encourages AI chatbot use, Panel (ii) splits workers based on whether their employer allows AI chatbot use, and Panel (iii) splits workers based on whether they have participated in firm-arranged AI chatbot training. Panel (i) is identical to Figure D.1. Whiskers represent 95% confidence intervals. The reported p-values test whether the coefficients differ between the two groups. *Sample:* All completed responses from the 2024 survey linked to registry data.

Figure E.4: Influence of Employer Initiatives on Worker Gaps in AI Chatbot Adoption

(i) Usage Policy: Encouraged

(ii) Usage Policy: Not Allowed

(iii) Firm-Arranged Training

Notes: This figure illustrates the impact of employer initiatives on worker disparities in AI chatbot adoption. The estimates are obtained from regressions of AI chatbot adoption on worker characteristics X , controlling for occupation fixed effects, and are estimated separately based on employers' AI chatbot initiatives. Panel (i) splits workers based on whether their employer encourages AI chatbot use, Panel (ii) splits workers based on whether their employer allows AI chatbot use, and Panel (iii) splits workers based on whether they have participated in firm-arranged AI chatbot training. For each of these, subpanels (a) predicts whether workers have ever used AI chatbots for work, while subpanels (b) predicts whether workers use AI chatbots daily. Panel (i) is identical to Figure E.2. Whiskers represent 95% confidence intervals. The reported p-values test whether the coefficients differ between the two groups. *Sample:* All completed responses from the 2024 survey linked to registry data.
