

Figure A8: *Augmentation*. Employment changes by age and augmentation quintile using Claude usage data from [Handa et al. \(2025\)](#). Augmentation quintiles are defined based on the share of queries related to an occupation that are classified by Claude as augmentative. Darker lines are more augmentative quintiles. The red line shows the overall trend pooling across quintiles. Occupations whose associated tasks all have fewer than the minimum number of queries to appear in the usage data are treated as a separate category, coded as 0.

Figure A9: Employment changes by age and automation level using Claude usage data from [Handa et al. \(2025\)](#). Excluding occupations that have no Claude usage or are in the lowest quintile of overall Claude usage conditional on some usage.

Figure A10: Employment changes by age and augmentation quintile using Claude usage data from [Handa et al. \(2025\)](#). Excluding occupations that have no Claude usage or are in the lowest quintile of overall Claude usage conditional on some usage.

Figure A11: Changes in annual base compensation by age and occupation. Annual base compensation is deflated to 2017 dollars using the PCE deflator.
