

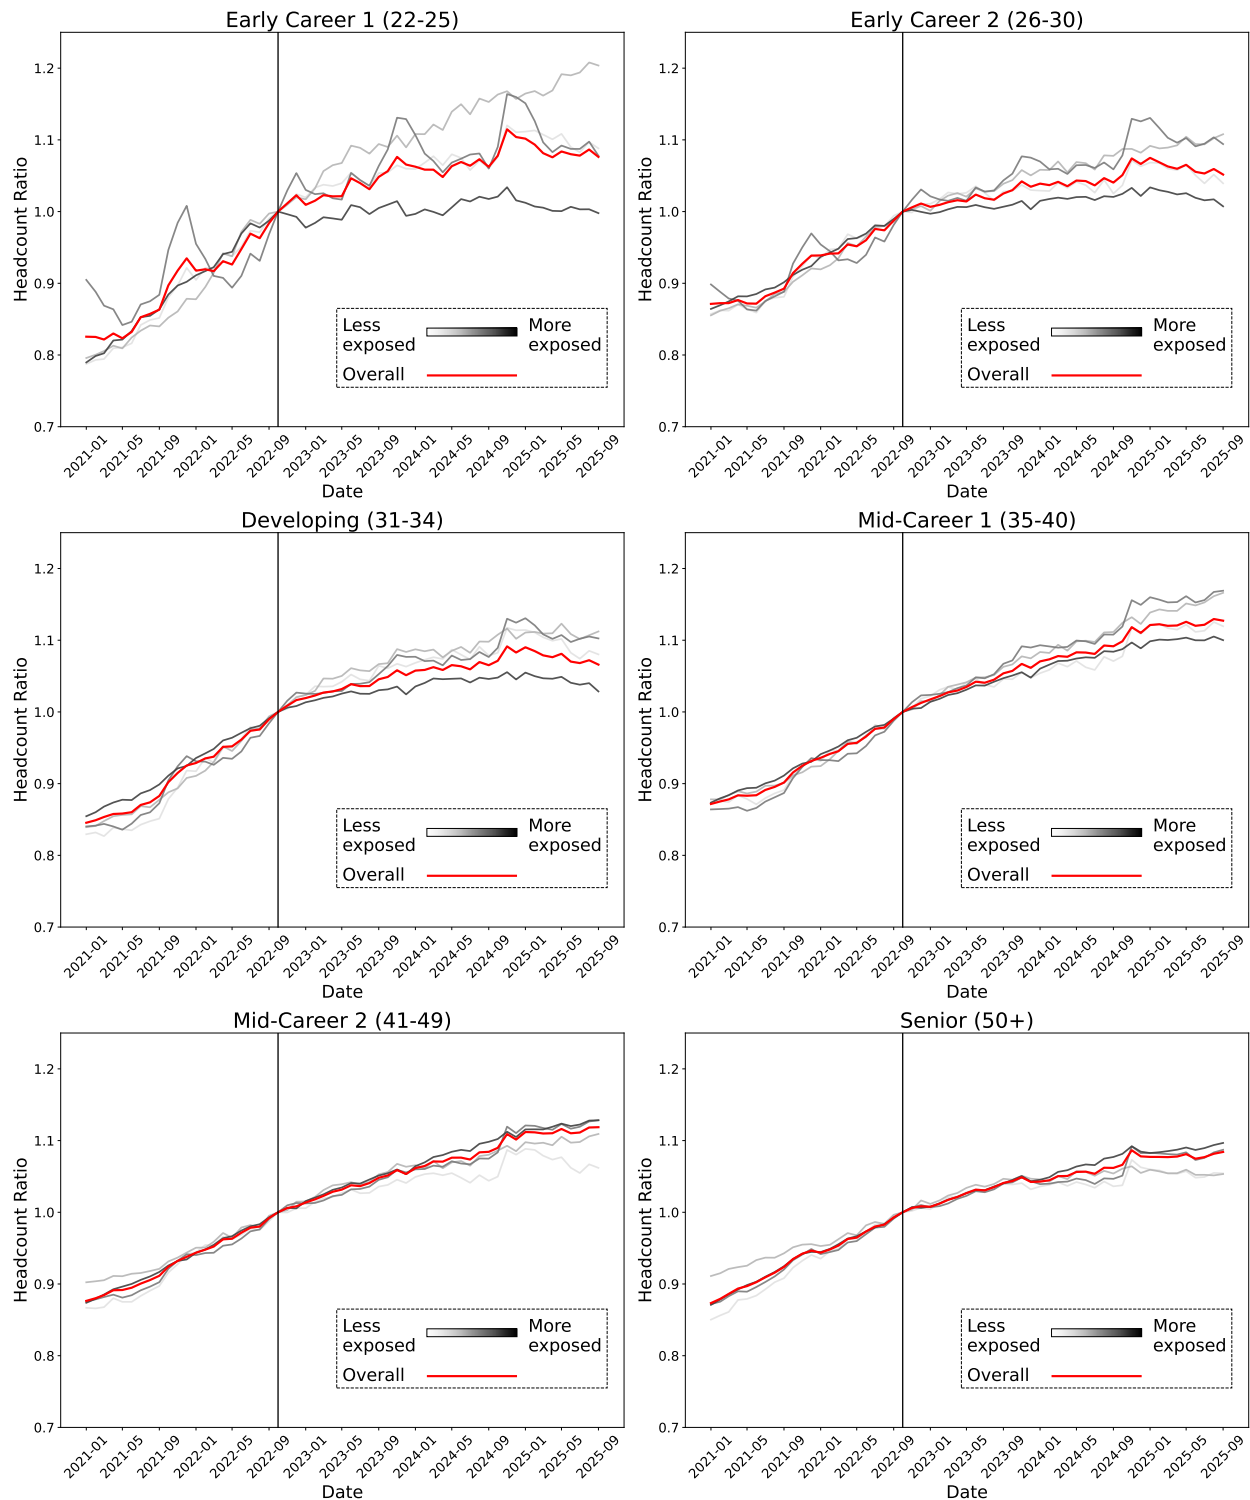

Figure A24: Employment changes by age and exposure quintile using measures from [Eloundou et al. \(2024\)](#). Considering only occupations with above median interest rate exposure using data from [Zens et al. \(2020\)](#). Only a few occupations with high interest rate exposure also have high AI exposure. All occupations in the fourth and fifth quintile are consequently grouped together in level 4. The remaining quintiles are coded as 1, 2, and 3.

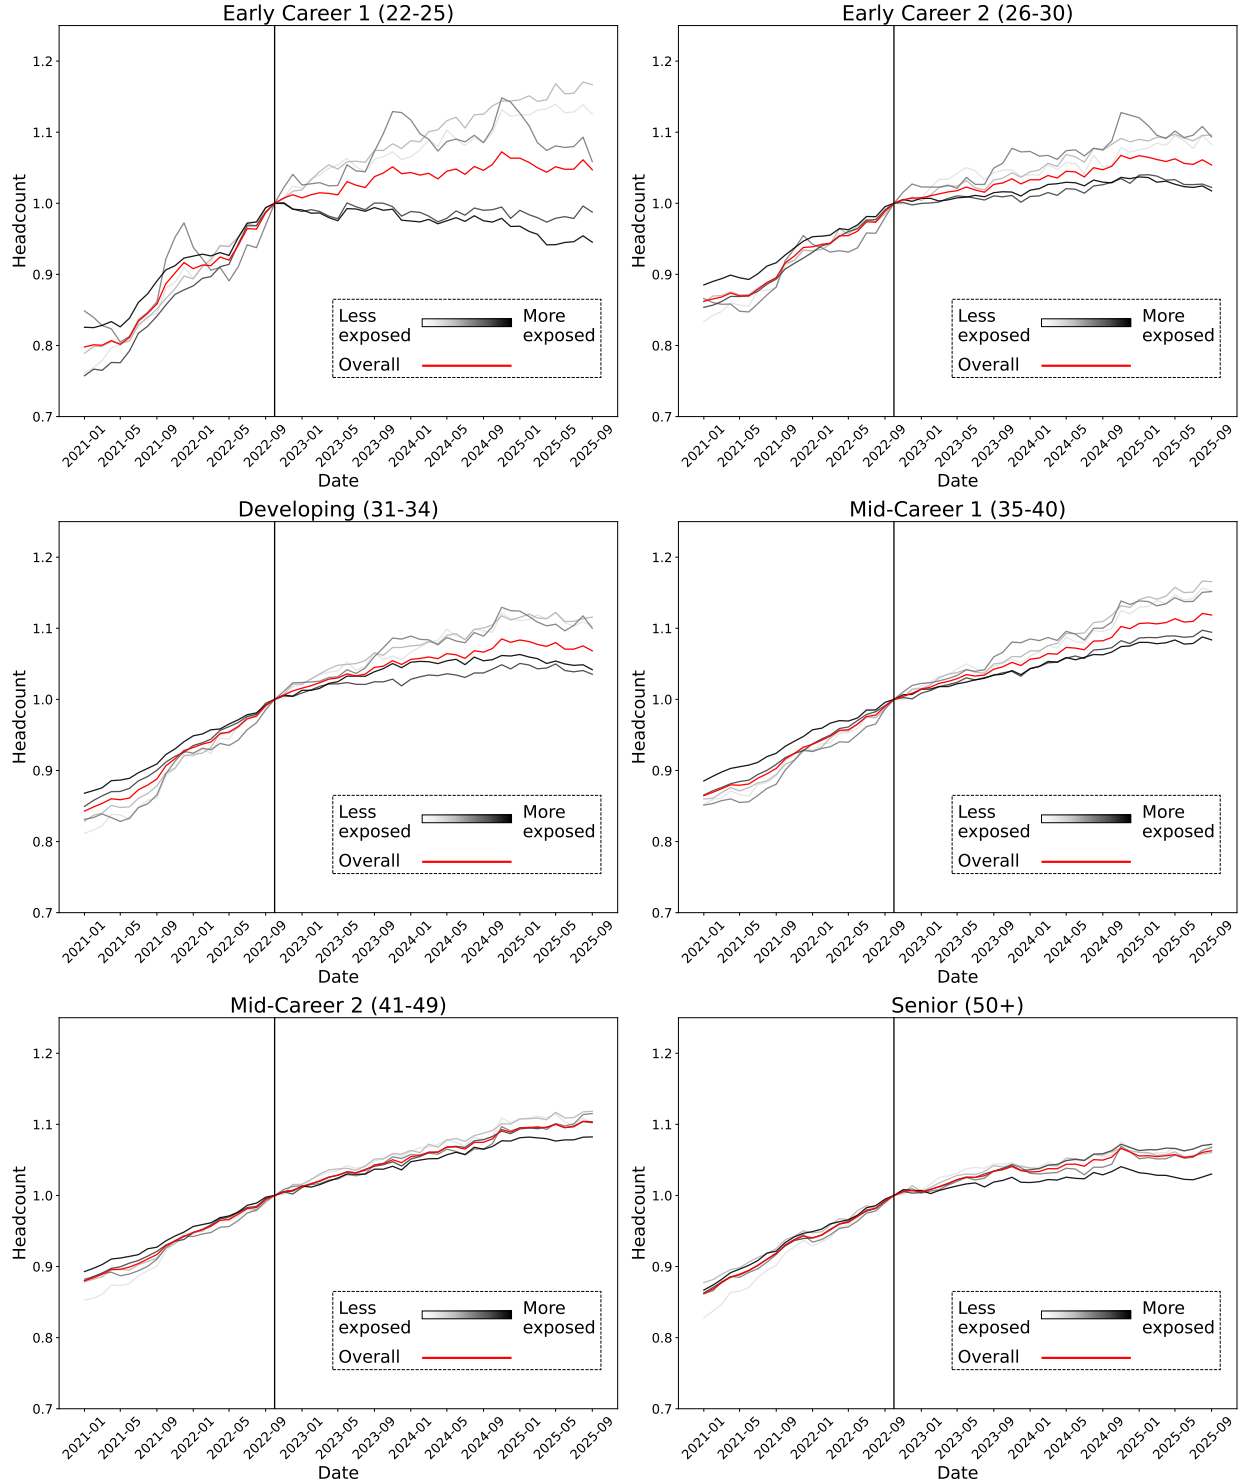

Figure A25: Employment changes by age and exposure quintile using measures from [Eloundou et al. \(2024\)](#). Considering only men.

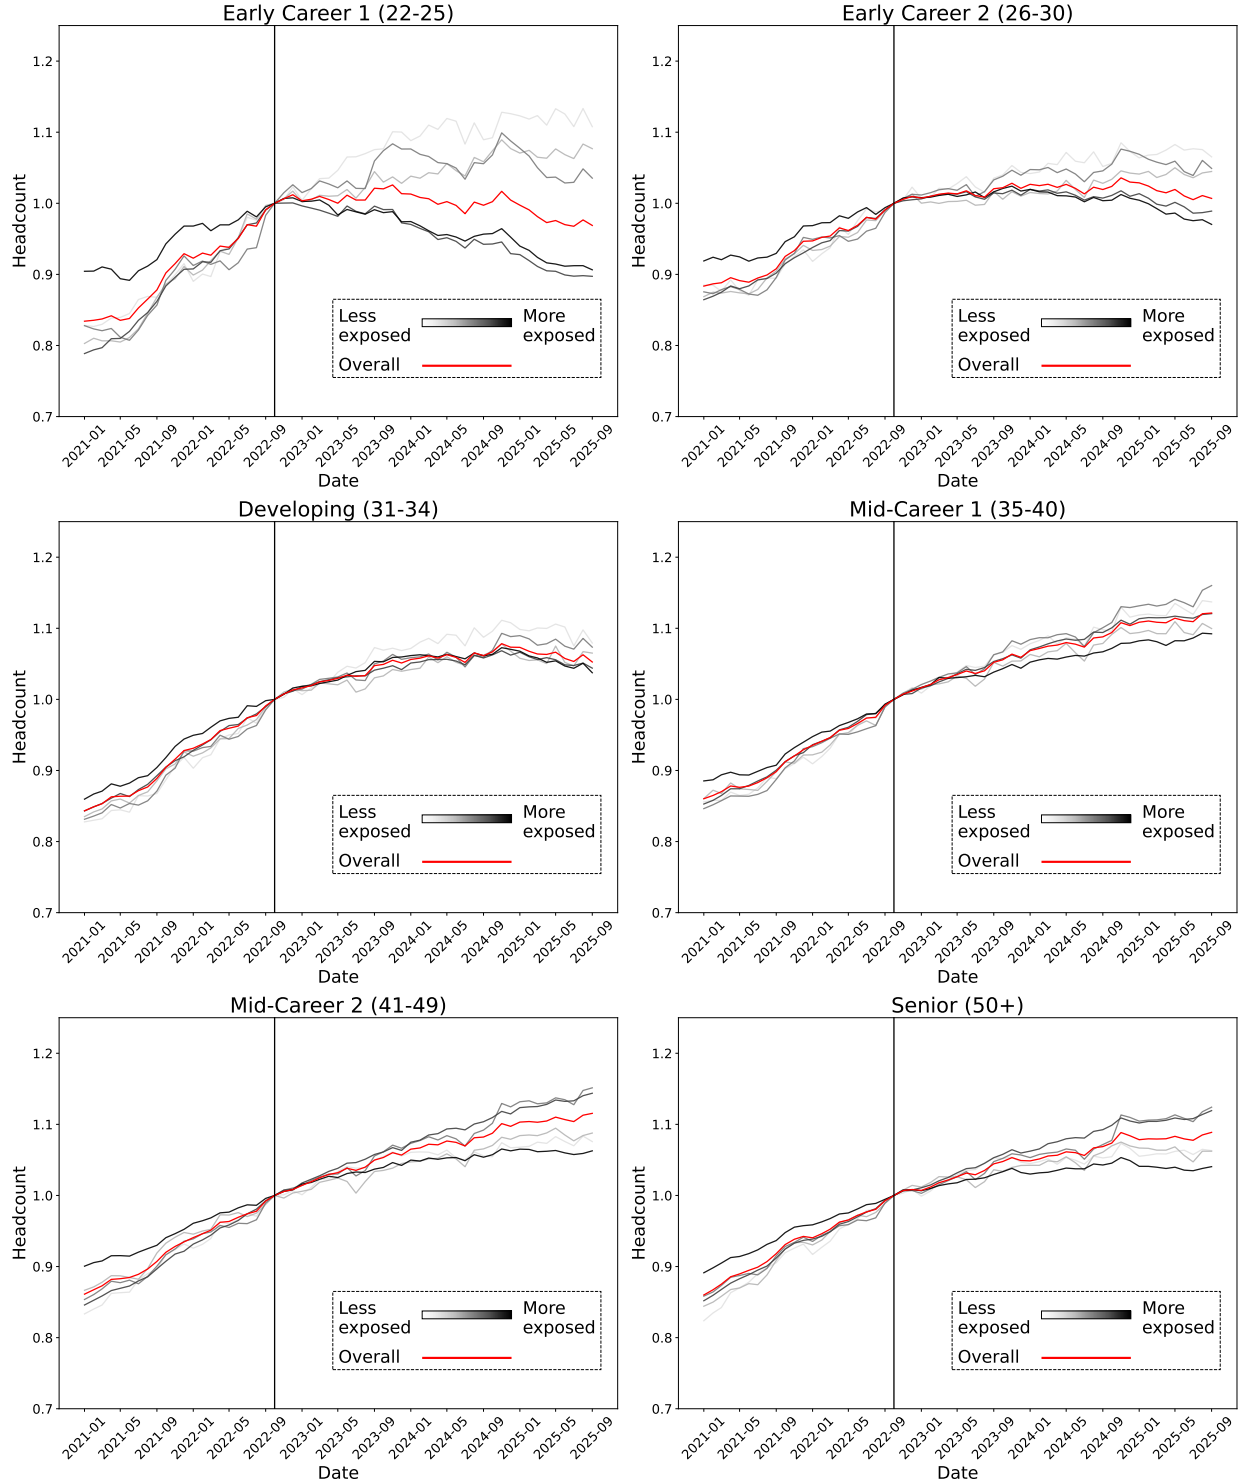

Figure A26: Employment changes by age and exposure quintile using measures from [Eloundou et al. \(2024\)](#). Considering only women.

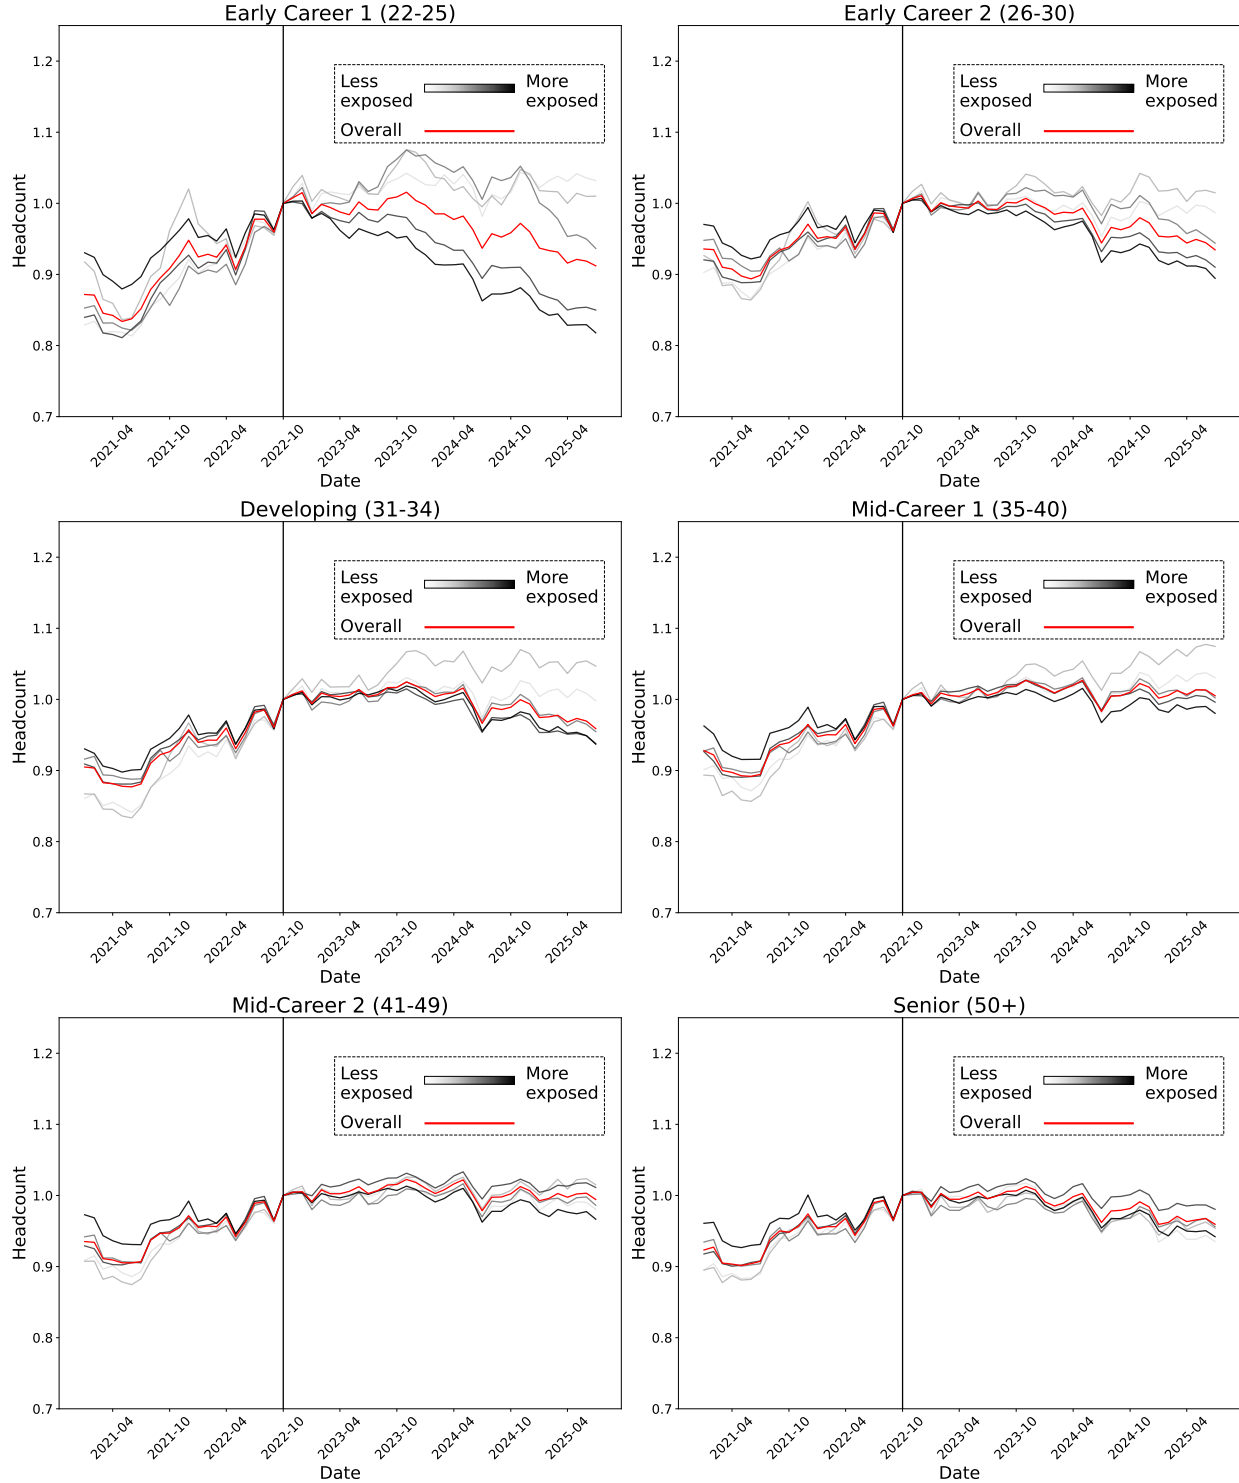

Figure A27: Employment changes by age and exposure quintile using measures from [Eloundou et al. \(2024\)](#). Using the full sample of firms.
